

Task 11 ~~+~~ oracle data base forms ~~to~~ 6/10/25

~~Amn~~ To designing an application with oracle forms, menus, reports, builder involves creating a user interface using forms and generating report using report builder

Install oracle form & report builder

Ensures that the oracle forms & report builder installed on your development machine

Design the data model:

In oracle form to define the data model that connect to the database ~~schedule~~ we use the data block wizard to create a views.

Design forms:

1. create a new form which major component to application

2. Add a form element like text fields button, list to forms.

3. use the property palette to configure the properties of form element

4. write PL/SQL code to handle business logic and data validation

5:- Test the forms within the development environment

Reports provide way to present data of form application. To create reports using oracle report builder

step 1:- open oracle report builder

step 2:- create a new report (or) use act existing one

step 3:- define the data source for the report

step 4:- design the report layout, including headers, footers and data columns.

step 5:- Add reports parameters if needed to allow user to customize the reports

step 6:- create preview the report to ensure it meets the require element.
